Section 1: Theoretical Foundations
Long documents require sustained memory discipline and stable paragraph grouping across consecutive p

Section 2: Execution Architecture
Every conversion step must maintain path reservations and clean temporary resource isolation.

Section 3: Structural Extraction
Headings and paragraphs must not bleed across physical page break boundaries.

Section 4: Memory Bounds and Ceilings
Buffer allocations must remain flat over thousands of pages.

Section 5: Final Verification
Verification confirms deterministic output and zero data loss.
